

IN THE CLAIMS:

Please cancel claims 7 and 8. Please also amend claim 1, as shown in the complete list of claims that is presented below.

1. (currently amended) An improved resin pulley formed at least in part of a resin composition, wherein the improvement comprises:

the resin composition contains a phenol resin as a base resin, and contains ~~[[20]]~~ 33 to 50 % by weight of an inorganic powder having a Mohs hardness of not less than 6.5, 20 to ~~[[40 %]]~~ 30 % by weight of a reinforcing fiber, and 1 to 5 % by weight of fluoro-resin powder having an average particle diameter of not more than 10 μm as a lubricant,

wherein the inorganic powder has a content ratio (% by weight) W_p , the reinforcing fiber has a content ratio (% by weight) W_f , and $W_p > W_f$.

2. (original) The resin pulley according to claim 1, wherein the inorganic powder is a spherical silica powder having an average particle diameter of not more than 30 μm .

Claim 3 (cancelled).

4. (original) The resin pulley according to claim 1, wherein the reinforcing fiber is a glass fiber.

5. (original) The resin pulley according to claim 1, wherein the phenol resin is a phenol resin having a number average molecular weight of 600 to 900.

6. (previously presented) The resin pulley according to claim 1, wherein the average diameter of the fluoro-resin powder is not less than 1 μm .

Claims 7 and 8 (cancelled).

9. (previously presented) The resin pulley according to claim 1, wherein the phenol resin has a content ratio (% by weight) W_r , and $W_p > W_r$.
